Phone Number: 5539227525

LinkedIn: [DanielRodriguez](#) —  [DANIELROCO09](#)

Summary

Applied Mathematician and Programmer specializing in Data Science and algorithmic design. Experienced in building distributed data pipelines and anomaly detection models with **Python, Spark, and SQL**. My focus is on bridging the gap between statistical theory and technical implementation, ensuring each solution is both analytically rigorous and computationally efficient.

Skills

Programming Languages: Python, Java, Bash, R

Libraries Frameworks: TensorFlow, Matplotlib.

Specialized Knowledge: Machine Learning, Statistics.

Databases: MySQL, MongoDB

Data Visualization Tools: Tableau, Excel

Version Control: Git/Github

Operating Systems: Linux, Windows

Soft Skills: Team Collaborate, clear communication to technical and executive audiences, Implementation Deployment.

Education

Bachelor of Science in Applied Mathematics and Computer Science

National Autonomous University of Mexico (UNAM) - FES Acatlán

Junior Full Stack Java Developer Bootcamp

Generation México.

Languages

Spanish: Native

English: Intermediate

Professional experience

Smartekh — Cybersecurity & Data Analysis Trainee

Jan 2026 – February 2026

- Analyzed system and security event data to identify anomalies and unusual behavioral patterns.
- Performed exploratory analysis on log datasets to differentiate normal vs. suspicious activity.
- Generated structured reports summarizing findings and potential risk indicators.
- Applied statistical reasoning to interpret event frequency, outliers, and correlations.

FES Acatlán Technological Development Center “CEDETEC” *June 2025 – November 2025*

- Active participation in the database migration process, ensuring the integrity, availability, and consistency of information during and after the transfer.
- Maintenance and updating of the backend of faculty websites, ensuring the functionality, security, and scalability of the developed platforms.
- Collaboration on technical documentation and generation of periodic reports for incident tracking and improvements implemented

Projects

CloudSteer: Distributed Computing Cluster

June 2025 – December 2025

- Designed and deployed a **24-node distributed computing cluster**, improving processing efficiency by 40 percent.
- Leveraged **Docker for containerization** and **PySpark for scalable data processing**.
- Integrated **AWS for cloud storage and compute resources**.

Crypto-Social Signal Integrator – Kaggle (Predictive Modeling Project)

January 2026 – May 2025

- Built a predictive framework that integrates social media signals with financial time series to enhance market trend forecasting.
- Optimized data processing workflows using SQL and Python, reducing noise in large-scale social datasets for cleaner signal extraction.
- Applied advanced statistical modeling to bridge the gap between social trend theory and technical trading execution, focusing on data-driven insights.

Certifications

- Cloud Data Engineering (Coursera - Duke University)
- Data Engineering: SQL, Python & Spark (Udemy)
- Associate Data Engineer in SQL (Data Camp)

Extracurricular Activities

Member of GUAPA (Advanced Algorithms and Competitive Programming Group)

- Competed in **national and international programming competitions**, including **ICPC**.
- Mentored peers in **graph theory, dynamic programming, and competitive coding techniques**.
- Participant in Training Camp Mexico 2025
